# Screw-in RTD temperature probe

## With form B terminal head

- For temperatures between -50 to +600 °C
- Comes with replaceable measuring insert
- . Available as single and double RTD temperature probe
- Terminal head form B, BUZ, BUZH, BBK, AB7, and KGI-1
- Available with transmitter

### **Brief description**

Screw-in RTD temperature probes are predominantly used for measuring temperatures in liquids and gases. The reliable tightness of this installation type under negative pressure as well as overpressure is an important selection criterion. The application areas are, among others, in airconditioning and refrigeration technology as well heater and furnace construction and apparatus engineering.

The terminal head is suitable for temperatures up to +100 °C. In addition to the standard form B connection head, the BUZ, BUZH, BBK, AB7, and KGI-1 design types are also available.

A Pt100 temperature sensor according to DIN EN 60751:2009 / IEC 60751:2008 (temperature coefficient  $\alpha$  = 3.850 × 10<sup>-3</sup> °C<sup>-1</sup>), class B in two-wire circuit, is used as standard as the measuring insert; versions with Pt500 or Pt1000 are also possible. The connection is optionally possible in a three-wire and four-wire circuit. A transmitter can be integrated into the terminal head as an option.

### **Functional safety**

With this product, JUMO provides a number of different possibilities in terms of functional safety to realize a completely or partially certified solution.

If you require consulting with regard to the safety integrity level (SIL) or performance level (PL), you can contact us at sil@jumo.net to arrange a personal appointment.

The safety data (MTBF, MTTFD, and FIT values) can also be accessed on demand for this item under sensors@jumo.net.

## Wtrans B – head transmitter with wireless data transmission

Extra code 924

The Wtrans B head transmitter with wireless data transmission (data sheet 707060) is used in conjunction with a Wtrans receiver (data sheet 902931) for stationary or mobile acquisition of temperatures with RTD temperature probes or thermocouples.

The measured values are transmitted wirelessly to the receiver of the Wtrans measuring system. The measured values are displayed on the receiver and are available in digital format on the RS485 interface and as analog outputs. Alternatively, different alarms can be signaled with two relay outputs.

This head transmitter, designed for industrial applications, comprises a transmitter with integrated transmission unit and an antenna-battery housing. The transmitter is designed for mounting in form B terminal heads and works in an ambient temperature range of -30 to +85  $^{\circ}$ C.

The radio frequency of the Wtrans measuring system is 868.4 MHz. This frequency is largely impervious to external interference and allows data to be transmitted even in harsh industrial environments. When using the antenna holder for wall mounting with the 3 m antenna cable for the receiver, the open air range is 300 m.

A 3.6 V, 2.2 Ah (size AA) lithium battery is used for the head transmitter voltage supply.

A setup program is available as an accessory for easy configuration and parameterization of the head transmitter and the Wtrans receiver on a PC. The OnlineChart function can be used optionally to record the measured values on a PC.
